INCREASED POTATO YIELD

The experience of many years has con-clusively proved that the loss caused by potato blight can be, to a great extent, prevented by spraying, and the operation has now come to be regarded as essential to the successful cultivation of the potato crop. The reports received by the Department of Agriculture from a large number of d'stricts show that those who take the trouble to carry out the work properly are abundantly rewarded with an increased yield, whi'e those who neglect to spray suffer heavy loss both in quantify and the quality of the crop. Now is the time to spray. Get in touch without delay for your spraying materials with Harpur Bros., Quey, Waterford.
